### **Toward equitable language therapy in aphasia**

Chaleece W. Sandberg, Ph.D., CCC-SLP  
Semantics, Aphasia, and Neural Dynamics Laboratory  
The Pennsylvania State University

The field of speech-language pathology, especially in the US, is experiencing a critical health services disparity in the form of unequal access to appropriate services for residents who speak languages other than English. This threat to quality of life disproportionately affects historically marginalized groups. One barrier to resolving this disparity is the lack of appropriate therapy materials.

In this talk, I will present ongoing collaborative work aimed at increasing the availability of theoretically based, evidence-based, and culturally and linguistically appropriate therapies for individuals with aphasia who speak languages other than English.
